

Proposal for the iGraphics project “Typing Master”

Hello sir, I am Anindya Biswas, student ID - 2205107. I have been assigned the iGraphics project “*Typing Master*”. “*Typing Master*” is a program designed for users to practice typing and test their typing skill. With the program, users can easily measure their typing speed with a range of various words. Users can either use the program to learn fast typing or challenge themselves with typing tests of various difficulty. They can also track their progress over time. Users will be able to measure their typing speed and accuracy through the exercises.

Here are the program features I planned to add:

1. Profile creation, a user can create profile to keep track of their progress.
2. A menu with interactive buttons for easier navigation.
3. Typing exercise with various levels of difficulty.
4. Feedback on user’s typing speed (WPM), accuracy and error count.
5. Save and present user’s progress over time.
6. Some customizable features like customizable background, music etc.
7. Scoring system to reward competent users.
